

Assignment 1:

Write down the Positive, Negative and End to End Scenarios for E-commerce website (<https://www.saucedemo.com/>)

Manual:

Expecting a good format of test case module in Excel/Google sheet

Mandatory Columns: Severity, priority, steps, expected, actual, status.

Automation:

Write the automation script with the Positive and Negative test cases in Selenium or Playwright with any framework.

Submit as a public GitHub repo with a GitHub Actions workflow that runs on push.

1-page README.md:

- Framework choice + why
- Extension plan (parallelisation / reporting)

Take the leverage of AI and build extensive automation.

Assignment 2:

Target: <https://fakestoreapi.com/> (public, e-com-shaped: cart + products + auth)

Design a test suite for Cart CRUD (POST / GET / PUT / DELETE).

Cover:

- Positive cases
- Negative cases
- Authentication
- Response schema validation

One data-driven test:

- Same scenario over 3+ product IDs

Senior bonus:

- One schema / contract test — snapshot the response shape and assert future responses conform.

1-page README.md:

- Framework choice + why
- Extension plan (parallelisation / reporting)

Take the leverage of AI and build extensive automation.
